Indus inscriptions: complete catalogue

Every record in the Interactive Corpus of Indus Texts export used by this project: 5,679 records (inscribed sides or faces) from 4,075 catalogue numbers at 77 sites. Built 29 October 2026 for Arham Partap Jain, from `indus-lab/raw/inscriptions.csv` (sha256 c22d39c3…3429) by `library/build/build_library.py`.

How to read a row

- **No.** is this catalogue's running number, 1 to 5,679, sorted by site and then catalogue number. The same numbers are in `library/inscriptions/inscriptions.csv`.
- **Seal / object no.** is the CISI number (*Corpus of Indus Seals and Inscriptions*, Joshi & Parpola 1987; Shah & Parpola 1991; Parpola, Pande & Koskikallio 2010). Its prefix names the site: M = Mohenjo-daro, H = Harappa, L = Lothal, K = Kalibangan, and so on. One object with writing on several sides has one CISI number and several records. A dash (–) means the object has no CISI number; use its ICIT number.
- **ICIT** is the record number in the Interactive Corpus of Indus Texts (Wells & Fuls). The part after the dot is the side.
- **Object** is the ICIT type code: SEAL (S square, R rectangular, C cylinder…), TAB tablet, POT inscribed pottery, TAG sealing or tag, and so on.
- **Dir.** is the writing direction recorded by ICIT. R/L is right to left, the usual direction of the script; L/R is left to right; NR means not recorded; T/B is top to bottom.
- **Signs** are ICIT sign numbers, in the order the corpus stores them. `+` at an end means the text is complete there; `[` or `]` means the object is broken there; `/` is a new line; **000** is a sign that cannot be read or identified.

Left out on purpose: the upstream "sanskrit" and "translation" columns. They are one researcher's proposed readings, not facts about the texts. Rounds 46–47 of this project tested that key and found its output no more language-like than its own shuffles. No photographs are reproduced, because the CISI plates are under copyright.

Duplicates. Records are not independent texts. Many tablets were pressed from one mould, and many seals repeat the same text.
